INTRODUCTION

The testing phase ensures that the IT procurement process works correctly and that standard laptop orders are automatically processed using ServiceNow Flow Designer.

TEST CASES

1. Laptop Request Submissions

Submit a standard laptop request through the request form.

Verify that the request is successfully created.

2. Request Approval

Check whether the request is automatically sent to the appropriate approver.

Verify that the approval status is updated correctly.

3. Flow Trigger

Submit a valid laptop request.

Verify that the Flow Designer flow is triggered automatically.

The Service Catalog trigger was tested by placing a Standard Laptop request. The flow was checked to ensure that it starts correctly after the request and approval process.

at the correct stages.

4. Catalog Task Testing

A Catalog Task was created automatically after approval. The task was checked to confirm that the short description is updated as “Laptop need to Configured”.

5. Assignment Group Testing

The generated Catalog Task was tested to verify that it is automatically assigned to the Hardware assignment group.

6. Approval Testing

The Standard Laptop request was submitted and the approval process was tested. After approval, the Flow Designer workflow was checked to ensure that the Catalog Task was generated.

7. End-to-End Testing

The complete workflow was tested from placing the Standard Laptop order to approving the request and generating the Catalog Task. The final record was checked to confirm the updated status, short description, and assignment group.

Test Result

All the major workflow steps were tested successfully. The automated flow creates the required Catalog Task and assigns it to the Hardware team after approval. This confirms that the workflow reduces manual intervention and supports faster laptop configuration.

Conclusion

Testing confirms that the ServiceNow Flow Designer automation works as expected for standard laptop procurement. The workflow successfully connects the Service Catalog request, approval process, and Hardware team assignment.

Expected Result

The complete laptop procurement process should work automatically from request submission to task completion, reducing manual work and ensuring that the standard laptop order follows the defined workflow. Project Testing
